

ABSTRACT

The present invention is directed to technology for modifying groups or other types of entries after those entries have been created. In one embodiment, the invention includes modifying group objects that have already been instantiated by adding and/or removing auxiliary classes and their associated attributes. The present invention can be used with an Identity System that stores group objects in a directory. Alternatively, the present invention can be used with other types of entries, other types of systems and/or other types of data stores.
